Airwave

A quick introduction for your team

Made for the technician. Useful to the whole team.

Airwave combines smart safety glasses with software for answers, job notes, and reports. Technicians can capture what they see, ask Blue about manuals and past jobs, and keep the details together.

A tool for the job

Safety glasses with a camera, microphone, and open-ear speakers. The Airwave mobile app connects technicians to Blue, job notes, and reports.

Help when a technician needs it

Blue surfaces information from the manuals and job history available in the workspace. Technicians keep their judgment in the process.

A record the team can use

Captured observations, photos, and notes can become reports for a technician to review and share. Start with a service visit, inspection, or site walk.

A practical way to evaluate it

Pick a recurring job. Look at how the technician captures it, what the resulting report includes, and how it fits the team’s existing process.
